# Power Optocoupler Terminal Block up to 10 A DEK-OV... 

## 1. Brief Description

The Phoenix Contact Interface DEK terminals offer complete interface functions in terminal block housings with a width of only 6.2 mm ( 0.244 in .) These powerful interfaces do not only share the design of the terminal blocks but also their highly convenient application due to the use of standard terminal accessories.

The DEK family offers the suitable solution for every industrial voltage valuefor signal input as well as output.
High switching power is a standard feature of DEKOV optocoupler terminals.
For applications with high switching frequency where electro-mechanical relays rapidly reach the end of their service life you can now apply the wear-resistant power optocoupler DEK-OV terminal block.
Integrated LEDs clearly signal the switching state of electronic terminal blocks and thus create a very good overview of the coupling level and the system.
Due to colored EB-DIK jumpering, terminals for supply and measuring signals the wiring is easy and efficient.

Integrated protection circuits such as free-wheeling diodes, diodes against polarity reversal and surge voltage elements protect coupling components and thus provide optimum system availability.

## Powerful Optocoupler Terminals

Powerful interface modules are required to switch actuators and controlling devices such as contactors, solenoid valves or motors directly using cost-efficient digital output cards (low power, no galvanic isolation but high-pos.).
The Phoenix Contact DEK-OV interface terminals offer a complete output interface based on terminal blocks with a width of only 6.2 mm ( 0.244 in .).

The key features of this power optocoupler include:

- Wear-resistant switching up to 24 V DC/10 A and 240 V AC/800 mA,
- Status display per LED,
- Galvanic isolation between input and output $2,5 \mathrm{kV}$,
- integrated protective circuit at the output,
- Zero voltage switch at AC output,
- Assembly and labeling is the same as for terminal blocks,
- Jumpering with the EB-DIK jumpers,
- Ambient temperature range $-20^{\circ} \mathrm{C}\left(-40^{\circ} \mathrm{F}\right)$ up to $+60^{\circ} \mathrm{C}\left(140^{\circ} \mathrm{F}\right)$,
- Also available as actuator type.

Mounting position
Mounting
Connection type
${ }^{1}$ ) Please observe the maximum current carrying capacity of the jumper and the number of connected inputs and outputs. The supply must only be provided directly at the insertion jumper.

Load current independent of the ambient temperature for DEK-OV-.../24DC/3 and DEK-OV-24DC/24DC/3/AKT, Nominal operating mode 100 \% ED

$$
\text { Ambient temperature }\left[{ }^{\circ} \mathrm{C}\right]
$$

(1) Mounting, horizontal

Mounting, vertical

Load current independent of the ambient temperature for DEK-OV-.../240AC/800,
Nominal operating mode 100 \% ED

Load current depending on the ambient temperature for DEK-OV-.../24DC/10
Nominal operating mode 100 \% ED

Note:
Types of insulating housings
Polyamid PA, not reinforced,
see INTERFACE catalog Color: Green
Torque for terminal block screw see
INTERFACE catalog.
Marking system and assembly material see CLIPLINE catalog.
The dimensioning cross section (see INTERFACE catalog) is meant for unstripped wires without ferrules.
Inductive loads must be limited to protect input and output with an effective protective circuit.
Items printed in bold can be supplied at short notice!
