## Features

- Low power consumption.
- Popular T-1 3/4 diameter package.
- General purpose leads.
- Reliable and rugged.
- Long life - solid state reliability.
- Available on tape and reel.
- Low current IF=2mA operating.
- RoHS compliant.

## Description

The Super Bright Red source color devices are made with Gallium Aluminum Arsenide Red Light Emitting Diode.

## Package Dimensions

## Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is $\pm 0.25(0.01$ ") unless otherwise noted.
3. Lead spacing is measured where the leads emerge from the package.
4. The specifications, characteristics and technical data described in the datasheet are subject to change without prior notice.

## Selection Guide

| Part No. | Dice | Lens Type | $\begin{gathered} \text { Iv (mcd) [2] } \\ @ 2 \mathrm{~mA} \end{gathered}$ |  | Viewing Angle [1] |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Min. | Typ. | 201/2 |
| WP7113LSRD | Super Bright Red (GaAIAs) | Red Diffused | 10 | 20 | $30^{\circ}$ |
|  |  |  | *4 | *8 |  |

Notes:

1. $\theta 1 / 2$ is the angle from optical centerline where the luminous intensity is $1 / 2$ of the optical peak value.
2. Luminous intensity/ luminous Flux: $+/-15 \%$.

* Luminous intensity value is traceable to the CIE127-2007 compliant national standards.

Electrical / Optical Characteristics at TA=25 ${ }^{\circ} \mathrm{C}$

| Symbol | Parameter | Device | Typ. | Max. | Units | Test Conditions |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\lambda$ peak | Peak Wavelength | Super Bright Red | 655 |  | nm | $\mathrm{IF}=2 \mathrm{~mA}$ |
| $\lambda \mathrm{D}[1]$ | Dominant Wavelength | Super Bright Red | 640 |  | nm | $\mathrm{IF}=2 \mathrm{~mA}$ |
| $\Delta \lambda 1 / 2$ | Spectral Line Half-width | Super Bright Red | 20 |  | nm | $\mathrm{IF}=2 \mathrm{~mA}$ |
| C | Capacitance | Super Bright Red | 45 |  | pF | $\mathrm{VF}=0 \mathrm{~V} ; \mathrm{f}=1 \mathrm{MHz}$ |
| $\mathrm{VF}_{\mathrm{F}}[2]$ | Forward Voltage | Super Bright Red | 1.65 | 2.5 | V | $\mathrm{IF}=2 \mathrm{~mA}$ |
| IR | Reverse Current | Super Bright Red |  | 10 | uA | $\mathrm{VR}=5 \mathrm{~V}$ |

Notes:

1. Wavelength: $+/-1 \mathrm{~nm}$.
2. Forward Voltage: $+/-0.1 \mathrm{~V}$.
3.Wavelength value is traceable to the CIE127-2007 compliant national standards
4.Excess driving current and/or operating temperature higher than recommended conditions may result in severe light degradation or premature failure.

Absolute Maximum Ratings at $\mathrm{TA}=25^{\circ} \mathrm{C}$

| Parameter | Super Bright Red | Units |
| :--- | :---: | :---: |
| Power dissipation | 75 | mW |
| DC Forward Current | 30 | mA |
| Peak Forward Current [1] | 155 | mA |
| Reverse Voltage | 5 | V |
| Operating/Storage Temperature | $-40^{\circ} \mathrm{C}$ To $+85^{\circ} \mathrm{C}$ |  |
| Lead Solder Temperature [2] | $260^{\circ} \mathrm{C}$ For 3 Seconds |  |
| Lead Solder Temperature [3] | $260^{\circ} \mathrm{C}$ For 5 Seconds |  |

## Notes:

1. $1 / 10$ Duty Cycle, 0.1 ms Pulse Width.
2. 2 mm below package base
3. 5 mm below package base

## Terms and conditions for the usage of this document

1. The information included in this document reflects representative usage scenarios and is intended for technical reference only.
2. The part number, type, and specifications mentioned in this document are subject to future change and improvement without notice. Before production usage customer should refer to the latest datasheet for the updated specifications.
3. When using the products referenced in this document, please make sure the product is being operated within the environmental and electrical limits specified in the datasheet. If customer usage exceeds the specified limits, Kingbright will not be responsible for any subsequent issues.
4. The information in this document applies to typical usage in consumer electronics applications. If customer's application has special reliability requirements or have life-threatening liabilities, such as automotive or medical usage, please consult with Kingbright representative for further assistance.
5. The contents and information of this document may not be reproduced or re-transmitted without permission by Kingbright.
6. All design applications should refer to Kingbright application notes available at http://www.KingbrightUSA.com/ApplicationNotes

## PRECAUTIONS

1. Storage conditions:
a.Avoid continued exposure to the condensing moisture environment and keep the product away from rapid transitions in ambient temperature.
b.LEDs should be stored with temperature $\leqq 30^{\circ} \mathrm{C}$ and relative humidity $<60 \%$.
c.Product in the original sealed package is recommended to be assembled within 72 hours of opening. Product in opened package for more than a week should be baked for $30(+10 /-0)$ hours at $85 \sim 100^{\circ} \mathrm{C}$.
2. The lead pitch of the LED must match the pitch of the mounting holes on the PCB during component placement. Lead-forming may be required to insure the lead pitch matches the hole pitch. Refer to the figure below for proper lead forming procedures. (Fig. 1)

Fig. 1
" $\bigcirc$ " Correct mounting method " $X$ " Incorrect mounting method
Note 1-3: Do not route PCB trace in the contact area between the leadframe and the PCB to prevent short-circuits.
3. When soldering wires to the LED, each wire joint should be separately insulated with heat-shrink tube to prevent short-circuit contact. Do not bundle both wires in one heat shrink tube to avoid pinching the LED leads. Pinching stress on the LED leads may damage the internal structures and cause failure. (Fig. 2)

Fig. 2
4. Use stand-offs (Fig.3) or spacers (Fig.4) to securely position the LED above the PCB.

Fig. 3
Fig. 4
5. Maintain a minimum of 3 mm clearance between the base of the LED lens and the first lead bend. (Fig. 5 and 6)
6. During lead forming, use tools or jigs to hold the leads securely so that the bending force will not be transmitted to the LED lens and its internal structures. Do not perform lead forming once the component has been mounted onto the PCB. (Fig. 7)

## Kingbright

7. Do not bend the leads more than twice. (Fig. 8)

Fig. 5

Fig. 6

Fig. 7

Fig. 8
8. During soldering, component covers and holders should leave clearance to avoid placing damaging stress on the LED during soldering.

$\bigcirc$

X

$X$
9. The tip of the soldering iron should never touch the lens epoxy.
10. Through-hole LEDs are incompatible with reflow soldering.
11. If the LED will undergo multiple soldering passes or face other processes where the part may be subjected to intense heat, please check with Kingbright for compatibility.
12. Recommended Wave Soldering Profiles:

Notes:
1.Recommend pre-heat temperature of $105^{\circ} \mathrm{C}$ or less (as measured with a thermocouple attached to the LED pins) prior to immersion in the solder wave with a maximum solder bath temperature of $260^{\circ} \mathrm{C}$
2. Peak wave soldering temperature between $245^{\circ} \mathrm{C} \sim 255^{\circ} \mathrm{C}$ for 3 sec ( 5 sec max ).
3.Do not apply stress to the epoxy resin while the temperature is above $85^{\circ} \mathrm{C}$.
4.Fixtures should not incur stress on the component when mounting and during soldering process.
5.SAC 305 solder alloy is recommended.
6. No more than one wave soldering pass.
