## Labeling Programmable Drivers

It is highly recommended that the drivers be labeled with information traceable to the programmed current. This information is critical to answering any field questions from the contractor or end user.

## Programming Guide

Refer to the SelectSYNC Programming Software User's Manual.

## Dimming: 0-10Vdc

| Parameters | Minimum | Typical | Maximum |
| :--- | :---: | :---: | :---: |
| Source Current out of 0-10V Purple Wire | 0 mA | -- | 2 mA |
| Absolute Voltage Range on 0-10V (+) Purple Wire | -60 V | - | +15 V |

Typical Dimming Circuit: 2-Wire Resistance

Typical Dimming Circuit: 2-Wire 0-10V Analog

## 0-10V Dimming Notes:

1. Part comes with two dimming input connectors + Purple/-Gray on the output side.
2. Part is compatible with most $0-10 \mathrm{~V}$ Wall Slide dimmers and $0-10 \mathrm{~V}$ dimming.
3. Output current will be $1 \%$ when Vdim=1.0V.
4. Output current will be $0 \%$ (off) when Vdim $<0.85 \mathrm{Vdc}$.
5. Output will be $100 \%$ with Purple/Gray open and $0 \%$ with Purple/Gray Shorted.
